EDUCATION

University of Illinois Urbana-Champaign

B.S. Computer Engineering, GPA: 3.5/4.0

Urbana-Champaign, Illinois

August 2023 - May 2027

Relevant Coursework: Machine Learning Applications, Operating Systems Design, Applied Parallel Programming, Algorithms & Models of Computation, Networks & Distributed Systems, Data Structures

TECHNICAL SKILLS

Programming: Python, C, C++, Dart, Java, SQL, JavaScript, TypeScript

Frameworks & Tools: Git, Docker, Firebase, REST APIs, React, Flutter, Figma, CUDA, Electron

EXPERIENCE

NVIDIA – Software Engineer Intern

Tegra Systems Software Team

May 2026 – Aug. 2026

Santa Clara, California

- Incoming software engineering intern on the Tegra team, working on power and performance optimization for NVIDIA's system-on-chip platforms used in automotive, robotics, and embedded AI applications

Illini Dads Association – Project Lead

Business Booster Spring 2026 Program

Jan. 2026 – May 2026

Champaign, Illinois

- Co-leading Business Booster initiative to raise \$8,000+ through multi-channel fundraising strategy including local restaurant and business partnerships, paid dad-student events, merchandise launches, and donation campaigns
- Managing execution of 3-4 business fundraiser events and coordinating 4+ joint workshops with campus RSOs to expand organizational reach and improve community engagement throughout Spring 2026 semester
- Developing marketing and social media strategies to grow Instagram following to 500+ and increase campus awareness, while overseeing 1-2 product line launches to diversify revenue streams and enhance brand presence

Swaram – Founder & Software Developer

Cross-Platform Music Notation App

Jun. 2024 – Sept. 2024

Urbana, Illinois

- Developed and launched a cross-platform mobile app using Flutter/Dart for iOS and Android, reaching 100+ downloads across North America, Europe, and Asia while maintaining a base of 50+ active users
- Designed and implemented custom keyboards with optimized layouts, increasing efficiency of complex music notation input by 40% compared to conventional methods, and collected feedback to guide feature improvements
- Integrated Firebase for real-time data synchronization and secure cloud storage, reducing inconsistencies by 30%, enabling near-instant updates across devices, and releasing regular updates to drive user engagement

PROJECTS

Real-time Recommendation Engine | *Python, REST API, ML*

Jun. 2025 – Jul. 2025

- Architected and developed scalable hybrid recommendation system combining collaborative and content-based filtering with dynamic weighting to optimize highly personalized recommendations per individual user profile
- Built multi-layer intelligent caches serving recommendations in sub-100ms latency with real-time updates, providing production-ready REST API and interactive CLI with live dashboards for cache hits, latency, and system health

Distributed Key-Value Store | *Python, REST API, Distributed Systems*

May 2025 – Jun. 2025

- Designed and implemented fault-tolerant distributed database with consistent hashing, configurable replication factors, and tunable consistency levels (one / quorum / all) for scalable storage across dynamic cluster topologies
- Built RESTful API and robust CLI interface for seamless peer-to-peer communication, validated quorum-based consistency under stress tests, and demonstrated strong fault tolerance during simulated multi-node failures

INTERESTS

Technical: Autonomous Systems, Machine Learning, Computer Architecture, Robotics, Operating Systems

Hobbies: Cooking, Boulderling, Tennis, Photography, Tabla/Drums, Investing, Reading, Video Games
